

Portalify Image Messaging Solutions

Rapidly delivering mission critical image messages to the point of need

Portalify image messaging solutions are used for mission critical alerting. Designed for increased security and public safety, these applications accelerate emergency response times, aid apprehension, and ultimately assist to save lives.

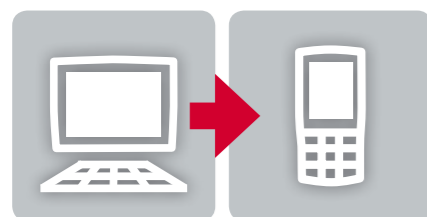

Portalify Image Messaging Solutions

Visual Information Alerting for Improved Security and Public Safety

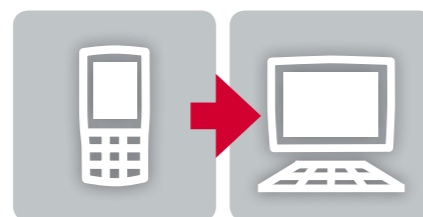

Portalify image messaging solutions can be successfully used for many critical incidents, for example, to:

- Deliver a photo of a missing child to police officers nearest to where the child was reported missing to dramatically increase the likelihood of finding quickly.
- Alert control room staff of an incident on a train caught on camera, allowing immediate action to be taken.
- Prevent a potential terrorist attack with still picture transfer from video footage to the nearest field officers.
- Direct a unit to a destination by sending a high quality map or satellite image to the unit
- Disseminate a building floor plan and/or hazardous material information to fire service units.
- Plan vehicle chassis cutting and access to an injured passenger prior to fire service arrival with a picture of accident damage.
- Stop a bank robbery by sending the nearest officers a still picture from CCTV surveillance footage.
- Transfer photo evidence of a speeding offence caught on camera to the terminal of an apprehending officer.

Dispatch Information from the Control Room

Operators can easily dispatch critical picture message information from the control room to the mobile terminals of field staff assigned to a mission, thereby enabling rapid on-site intervention upon information receipt.

Dispatch Information from the Field

Transmission in the reverse direction is also performed. Field staff can easily capture digital images and send these with relevant textual information to control room operators, aiding situational awareness and decision-making.

Share Information Between Colleagues on the Field

Information can also be sent directly from field workers to selected colleagues, increasing communications and safety.

View Information on Different Devices

Images caught by CCTV, Video Recorders and Cameras are instantly available for viewing on a wide variety of different terminals, e.g., TETRA radios, GPRS & 3G mobile phones, PDAs, In-vehicle Tablet PCs and other devices.

Manage all Types of Information

Selection, capture and transfer of still pictures from CCTV, live Video footage, Camera or any other imaging source is provided. Images can also be managed and stored for other purposes. Additionally, each picture is accompanied with message and associated location information.

Identify the Right Field Workers

Complete visibility over the location of all officers closest to an incident or suspect is available. In this way, control room operators can dispatch image messages to officers that are best placed to act.
